Technical information Download apps for ACMarket If you think about it for a moment, you will probably come up with quite a few names of alternative stores or android app repositories that pretend to be the biggest alternatives to Google Play since they allow us to download the same applications but in APK format, as well as others that are not available on the official market. Here is another alternative, with a wide range of legal and pirate applications, as it also allows us to download patched and modified applications. The alternative store to Google Play ACMarket is one of those stores that offer us patched content, whether games or apps. Its operation is very simple, being very similar to other applications of the same style. Simply download the APK of the store and carry out the installation. Once you access the main menu, you can search for applications, all sorted by categories, to install them on your device. We are talking about a huge repository of patched applications that we can download and use for free... including games like Minecraft, for example. These are the main features of this store: Clean and easy-to-use interface design. Direct download of apps from the store. Catalog of modded and patched applications. Daily upgrade to your application database. Possibility to customize its functions. Download patched apps and mods for free. All content is divided into different categories such as apps, games, videos, music, tools... by accessing each of them we can find different applications, as well as being able to move through featured applications and new applications. If you have read some opinions about ACMarket, you will have noticed that its users are very happy with this market. However, we have to recommend that you always download legal applications paying the price they are worth according to their developers, mainly for a few reasons: developers do not live in the air and need to earn money for their work. If they don't make money, they'll stop developing and then we won't have all those apps that we like so much. On the other hand, we hope you wouldn't want to work for free, neither would they. Further than that, no one can guarantee the security of these applications, as no one knows if they contain viruses or other malware basically because they do not undergo a verification process. What's new in the latest version Developers haven't revealed the change log for this alternative store. Follow
